

Case Study | SENA products application for serial printers.

Description

Below two case studies show wired and wireless SENA products application for serial printers.

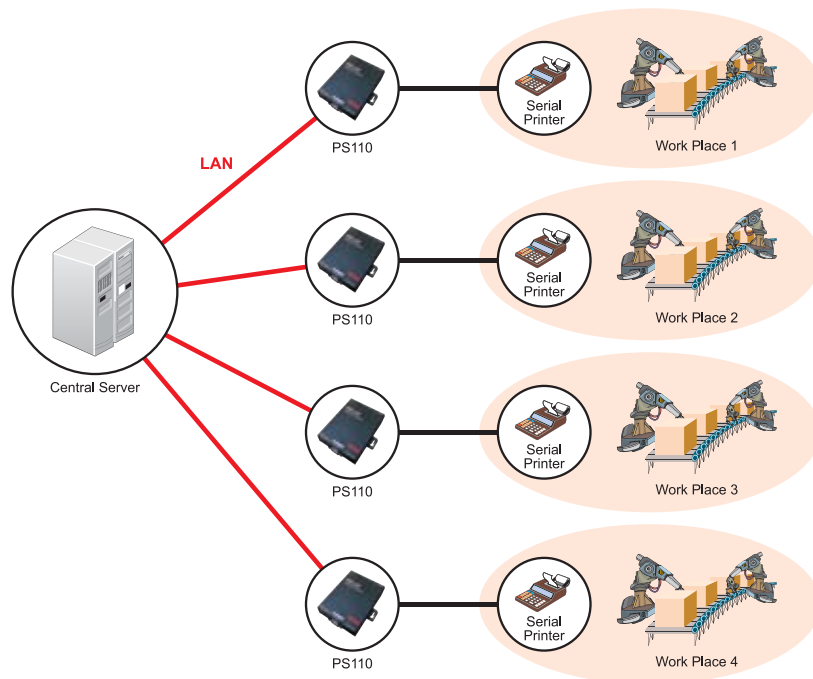

1. Wired case: PS110 - Serial device server
2. Wireless case: Parani-ESD200 - Bluetooth OEM serial module

How it works

1. Wired case: PS110 - Serial device server

Application: Printing work orders

The PS110s are used to connect serial printers in the assembly line to the TCP/IP network so the central server sends each work order to each work place via network. Work orders based on the customer's orders are sent from the centralized place in real time, so productivity can be improved dramatically.

2. Wireless case

The Parani-ESD200 is used in the special equipment to connect to the officer's smartphone. This equipment sends data wirelessly over Bluetooth to the Bluetooth mobile printer on each officer's waist for mobile printing. This wireless system provides better mobility and comfortableness than traditional wired mobile printing systems.

Benefits

1. Using SENA connectivity solution products, network capability can be easily added to existing products that have no network functionality.
2. SENA Bluetooth products can be used to implement wireless applications easily and cost effectively to overcome shortcomings of wired applications.
