

THE UNITED KINGDOM VEHICLE APPROVAL AUTHORITY

COMMUNICATION CONCERNING THE ~~APPROVAL GRANTED~~ <sup>(1)</sup> / ~~APPROVAL EXTENDED~~ <sup>(1)</sup> /  
~~APPROVAL REFUSED~~ <sup>(1)</sup> / ~~APPROVAL WITHDRAWN~~ <sup>(1)</sup> / ~~PRODUCTION DEFINITELY~~  
~~DISCONTINUED~~ <sup>(1)</sup> OF A TYPE OF PROTECTIVE HELMET ~~WITHOUT~~ / ~~WITH~~ <sup>(1)</sup> ONE / ~~MORE~~ <sup>(1)</sup>  
SPECIFIC ACCESSORY TYPE(S) PURSUANT TO UN REGULATION NO. 22.06

Approval No: E11\*22R06/02\*1067\*01

Reason(s) for extension:

- Modification of Variant(s)/Version(s)
- Addition of commercial names
- Addition of sun shield
- Addition of weight of the helmet
- Change of the shell material description
- Correction of item number 6.3. of the information document
- Correction of item numbering of the information document
- Modification of the approval label drawing
- Change of "Brief description of helmet"
- Correction of "Accessories included in the helmet homologation and functionality"

1. Trade mark: SENA
2. Type: PHANTOM
3. Sizes: XXL, XL, L, M, S
4. Manufacturer's name: SENA Technologies Co., Ltd.
5. Address:  
19, Heolleung-ro 569-gil  
Gangnam-gu, Seoul  
REPUBLIC OF KOREA
6. If applicable, name of manufacturer's representative: SENA Europe GmbH

7. Address:  
Paul-Henri-Spaak-Str. 22  
51069 Koln  
GERMANY
8. Brief description of helmet:  
PHANTOM PRO: Full face helmet with one visor type  
PHANTOM: Full face helmet with one visor type and one sun shield type
9. Helmet ~~without lower face cover (J)~~ / with protective lower face cover (P) / ~~with non-protective lower face cover (NP)~~ / ~~with detachable or movable lower face cover (P/J)~~ <sup>(1)</sup>
10. Type of visor or visors: SENA-FF-01 (E11 062006)
11. Brief description of visor or visors and inner visor if any: Clear visor made of polycarbonate (PC) with anti-scratch and anti-fog coating and 2.4 mm thickness
12. Helmet ready for specific accessory (SA) / ~~ready for universal accessories (UA)~~ <sup>(1)</sup>
13. Accessories included in the helmet homologation and functionality: SP149 (SA) (Bluetooth system)
14. If UA helmet, speakers (S or S45) / Microphone (M) / Front mounting (F) / Side mounting (L), Rear mounting (R) <sup>(1)</sup>: Not applicable
15. Submitted for approval on: As before (14 MARCH 2024) and 05 AUGUST 2024
16. Technical service responsible for conducting approval tests: Vehicle Certification Agency
17. Date of report issued by that service: As before (14 MARCH 2024) and 05 AUGUST 2024, 06 AUGUST 2024
18. Number of report issued by that service: As before (KSB625781 (1067/P)) and KSC631198 (1067/P ext.01), KSC631198 (SENA-I/V-01)
19. Comments: None
20. Approval ~~GRANTED~~ / EXTENDED / REFUSED / ~~WITHDRAWN~~ <sup>(1)</sup>
21. Place: BRISTOL

22. Date: 28 AUGUST 2024

## 1. DISRIPTION OF THE HELMET

- 1.1. Style of helmet : Full face
- 1.2. Category of helmet : "P" with protective lower face cover
- 1.3. Sizes
- Large Shell : XXL (63-64), XL (61-62)
- Medium Shell : L (59-60),
- Small Shell : M (57-58), S (55-56)

### 1.4. Weight

#### PHANTOM PRO

SIZE	XXL	XL	L	M	S
WEIGHT	1700g±50		1650g±50	1600g±50	

#### PHANTOM

SIZE	XXL	XL	L	M	S
WEIGHT	1750g±50		1700g±50	1650g±50	

- 1.5. Helmet ready for : Specific Accessory (SA)

- 1.6. Helmet prepared for (if UA helmet)  
: NA

## 2. SHELL

- 2.1. Material : **Fiberglass Composite**
- 2.2. Composition of the border joint on the shell  
: PVC Gasket
- 2.3. Ventilation system
- 2.3.1. Number of ventilations : 3
- 2.3.2. Positioning on the shell : Front of Crown (Crown), Rear of Crown, Chin guard (Center)

## 3. RETENTION SYSTEM

- 3.1. Chin strap
- 3.1.1. Material : Nylon webbing
- 3.1.2. Width : 24mm
- 3.2. Comfort padding of retention system  
: Polyester
- 3.3. Strap retainer : Double D ring
- 3.4. Anchorages : Secured to shell by means of a single rivet to each side of helmet shell

#### 4. PROTECTIVE PADDING

##### 4.1. Composition

	S-M Density (g/cm <sup>3</sup> )	L Density (g/cm <sup>3</sup> )	XL-XXL Density (g/cm <sup>3</sup> )
TOP	22±5	22±5	22±5
HEAD	33±5	33±5	33±5
Chin	55±5	55±5	55±5
Mouth	55±5	55±5	55±5

#### 5. COMFORT PADDING

##### 5.1. Composition and material

Comfort padding	: Sponge
Comfort tissue	: Polyester
Neck curtain	: Polyurethane

#### 6. VISOR

##### 6.1. Make (trade name of manufacturer)

: SENA

##### 6.2. Type

: SENA-FF-01

##### 6.3. ECE type-approval mark

: E11 062006-XXXXXXX

##### 6.4. Company name and address of manufacturer

: SENA Technologies Co., Ltd.  
19, Heolleung-ro 569-gil, Gangnam-gu, Seoul,  
Republic of Korea

##### 6.5. Material

: Polycarbonate

##### 6.6. Surface treatment

: Anti-scratch / Anti-fog coating

##### 6.7. Thickness

: 2.4mm

##### 6.8. Colour

: Clear

##### 6.9. Manufacturing method

: Injection moulding

##### 6.10. Transmittance

: ≥80%

## Inspection/Test Report: Protective Helmets and their Visors for Drivers and Passengers of Motorcycles and Mopeds

### Legislation

UNECE Regulation 22.06 (Revision 4 Amendment 3)

### Inspection/Test Details

Location of Inspection/Test: Qingyuan SENA Smart Helmets, China  
Date of Inspection/Test: 5 - 6 August 2024  
VCA Representative(s): Donghwa Woo  
Inspectors Home Office Location: VCA Korea  
Manufacturer's Representative(s): Suhan Kim  
Reason for Test Report: Extension of approval

### Manufacturer Details

Name and Address: SENA Technologies Co., Ltd.  
19, Heolleung-ro 569-gil  
Gangnam-gu, Seoul  
REPUBLIC OF KOREA  
Type: PHANTOM  
Commercial Description: PHANTOM, PHANTOM PRO, PHANTOM-ANC, PHANTOM-CAM  
Category: "P" with protective lower face cover

### Conclusion

The above mentioned component was tested in accordance with the above mentioned legislation and was found to comply in all respects. This report relates only to the items tested

Witness Engineer Signature:

Name: Donghwa Woo  
Position: Type Approval Engineer  
Date: 6 August 2024

## Issue Record

Issue 0 is original report

## Worst Case Rationale

Test carried out to cover the addition of a variant (PHANTOM) under the conditions as follows:

Number of samples tested						
Test	Shell Size	Large		Medium	Small	
	Consumer Size	XXL	XL	L	M	S
	Headform Size	625	625	605	575	535
General Specifications check				1		
Impact Absorption		5				
Impact Absorption Extra Point			2			
Hi/Low Energy Impact			2			
Projection and Surface Friction				1		
Rigidity		2				
Tests for Oblique impact and measurement of rotational acceleration		2				

Following impact points considered affected by the installation of the sun shield were tested:

- Impact Absorption, Hi/Low Energy Impact: B, P
- Impact Absorption Extra Point: BP, BXL, BXR, BXPL, BXPR

*Note: Include information on variants and versions this report covers, as applicable. Supporting documents may be annexed to this report*

## Inspection/Test Requirements

Complies  
Yes / NA

**Markings: Not applicable; section removed for clarity**

### General Specifications

6.1.	Basic construction of the helmet is in the form of a hard outer shell, containing additional means of absorbing impact energy and a retention system.	NA
6.2.	Protective helmet may be fitted with ear flaps and a neck curtain. It may also have a detachable peak, a visor, additional sun shield, electronic equipment or accessories and a lower face cover. If fitted with a non-protective lower face cover, the outer surface of the cover is marked 'Does not protect chin from impacts' and/or with the symbol shown in Figure 1 below, indicating the unsuitability of the lower face cover to offer any protection against impacts to the chin.  	NA
6.3.	No component or device is fitted to or incorporated in the protective helmet, unless it is designed in such a way that it will not cause injury and that, when it is fitted to or incorporated in the protective helmet, the helmet still complies with the requirements of this regulation.	NA
6.4.1.	Shell covers all areas above plane AA' and extends downwards at least as far as the lines 'CDEF' on both sides of the headform. <i>Note: See Annex 4, Figure 1A.</i>	NA

This test report shall not be reproduced except in full, without written approval of the technical service.

6.4.2.

At the rear, the rigid parts and, in particular, the shell, are not within a cylinder, defined as follows:

- Diameter: 100 mm;
- Axis situated at the intersection of the medium plane of symmetry of the headform and of a plane parallel to and 110 mm below the reference plane.

Note: See Annex 4, Figure 1B.

NA

6.4.3.

Protective padding covers all the areas defined in paragraph 6.4.1, with account being taken of the requirements of paragraph 6.5.

NA

6.5.

Helmet does not dangerously affect the wearer's ability to hear.

NA

6.5.

Temperature in the space between the head and the shell does not rise inordinately.

Note: To prevent this, ventilation holes may be provided in the shell.

NA

6.5.

Where means for attaching a visor are not provided, the profile at the front edge does not prevent the wearing of goggles.

NA

6.6.

All projections from, or irregularities in the outer surface of the shell greater than 2 mm, are tested for shear assessment according to paragraphs 7.4.1 or 7.4.2. The outer surface of the helmet is tested for friction assessment, according to paragraphs 7.4.1 or 7.4.2. This applies in particular to a movable lower face cover in all positions intended by the manufacturer.

Yes

6.7.

All external projections are radiused and any external projections other than press-fasteners are smooth and adequately faired.

Yes

6.7.1.

All external projections not more than 2 mm above the outer surface of the shell (e.g. rivet heads) have a radius of a minimum of 1 mm.

Yes

6.7.2.

All external projections more than 2 mm above the outer surface of

Yes

the shell have a radius of a minimum of 2 mm.

*Note: Latter specific requirements do not apply if a projection satisfies the requirements in paragraphs 7.4.1 or 7.4.2 below.*

6.8.

There are no inward-facing sharp edges on the inside of the helmet; rigid, projecting internal parts are covered with padding so that any stresses transmitted to the head are not highly concentrated.

NA

6.9.

Various components of the protective helmet are so assembled that they are not liable to become easily detached as a result of an impact.

Yes

6.9

In the case of visor and movable or detachable lower face cover, only when in not protective position, the detachment is acceptable provided that it is complete and not to cause possible injuries to the user

NA

6.10.

Retention systems are protected from abrasion.

NA

6.11.

Helmet is held in place on the wearer's head by means of a retention system, which is secured under the lower jaw. All parts of the retention system are permanently attached to the system or to the helmet.

NA

6.11.1.

If the retention system includes a chin-strap, the strap is not less than 20 mm wide under a load of 150 N  $\pm$  5 N, applied under the condition prescribed in paragraph 7.6.2:

 - mm

NA

6.11.2.

Chin strap does not include a chin cup.

NA

6.11.3.

Chin straps are fitted with a device to adjust and maintain tension in the strap.

NA

6.11.4.

Chin strap fastening and tensioning devices are positioned on the straps so that:

NA

- There are no rigid parts extending more than 130 mm vertically below the headform reference plane, with the helmet mounted on the appropriate sized headform\*
- The whole of the device is between the bony projections of the underside of the lower jaw\*

\*Strikethrough, as appropriate.

6.11.5.

If the retention system includes either a double-D ring or sliding bar fastening device ("roller buckle"), then means are provided to prevent the retention system being completely undone and also to retain the free end of the strap when the retention system is adjusted. (If the retaining system can be opened completely, it must be possible only with voluntary action. To prevent any possible misuse, the helmet must be provided with detailed instructions on the

NA

	use of the buckle if required.)	
6.11.6.	Sliding bar and double-D ring fastening devices are fitted with a pulling flap to be used for releasing the retention system. Its colour is red and its minimum dimensions are 10 x 20 mm.	NA
6.11.7.	If a retention system includes a quick-release mechanism, then the method of release of this mechanism is self-evident. Any levers, tabs, buttons or other components that need to be operated to release the mechanism are coloured red; those parts of the rest of the system that are visible when closed are not similarly coloured, and the mode of operation is permanently indicated.	NA
6.11.8.	Retention system remains closed when the tests described in paragraphs 7.3, 7.6 and 7.7 are carried out.	NA
6.11.9.	Buckle of the retention system is designed so as to preclude any possibility of incorrect manipulation. This means inter alia (among other things) that it is not possible for the buckle to be left in a partially closed position.	NA
6.12.	If the lower face cover is detachable or movable, the lower face cover is fitted with a device that maintains the intended position even during the complete series of impacts and retention (detaching) test. The device is such that incorrect handling is impossible. The control/actuating device must be of red colour. The helmet must comply with the requirements for helmet categories "J", "P" or both.	NA
6.13.	Characteristics of the materials used in the manufacture of helmets are known not to undergo appreciable alteration under the influence of ageing or of the circumstances of use to which the helmet is normally subjected, such as exposure to sun, extremes of temperature and rain. For those parts of the helmet coming into contact with the skin, the materials used are known not to undergo appreciable alteration through the effect of perspiration or of toilet preparations. The manufacturer does not use materials known to cause skin troubles. The suitability of a proposed new material is established by the manufacturer.	NA
6.14.	After the performance of one of the prescribed tests, the protective helmet does not exhibit any breakage or deformation dangerous to the wearer. Note: As example visor sunshield and shell significant cracks or any part partially detached (spoiler, lower face cover, accessories) that can hurt the user while he's rolling on the road.	NA

### Peripheral Vision

6.15.1 6.15.2	The technical service has selected from among the existing sizes of	Yes
------------------	---	-----

a helmet type the size it considers likely to yield the least favourable  
result and helmet placed on the headform corresponding to its size  
by the procedure set out in Annex 5 to this Regulation;

6.15.3.

There is no occultation in the field of vision bounded by:

Yes

- Horizontally: Two segments of dihedral angles symmetrical in  
relation to the median longitudinal vertical plane of the headform  
and situated between the reference and the basic planes. Each of  
these dihedral angles is defined by the median longitudinal vertical  
plane of the headform and the vertical plane forming an angle of  
not less than 105° with the median longitudinal vertical plane and  
whose edge is the straight line LK;

6.15.3.1.

- Upwards: Dihedral angle defined by the reference plane of the  
headform and a plane forming an angle of not less than 7° with the  
reference plane and whose edge is the straight line L<sub>1</sub> L<sub>2</sub>, the  
points L<sub>1</sub> and L<sub>2</sub> representing the eyes;

6.15.3.2.

- Downwards: Dihedral angle defined by the basic plane of the  
headform and a plane forming an angle of not less than 45° with  
the basic plane, and whose edge is the straight line K<sub>1</sub> K<sub>2</sub>.

6.15.3.3.

## Visors

6.16.1.	Systems of attachment of a visor to a helmet is such that the visor is removable. It is possible to manoeuvre the visor out of the field of vision with a simple movement of one hand. (However, the latter prescription may not be required for helmets which do not provide chin protection provided that a label is attached to the helmet to the effect of warning the purchaser that the visor cannot be manoeuvred.)	NA
6.16.2.	Angle opening (see annex 9) $\geq 5^\circ$ : <input type="text" value="-"/> °	NA

## Sun Shield

6.17.1	Sun shield does not restrain or prevent the movement of the visor. On opening the visor, the sun shield can pivot in the working position. By means of a simple movement the sun shield is able to be moved separately from the visor out of the visual field.	Yes
6.17.2.1	Sun shield does not restrict the field of vision given in paragraph 6.15. in the working or parking position. If the sun shield is fixed outside of the visor, the surface may include fixings or devices to make movement possible. The total surface of the fixings or devices does not exceed 2cm <sup>2</sup> ; they can be distributed on both sides of the field of vision.	Yes

## Conspicuity Marking

6.18.1.	In order to comply with national requirements for use, the helmet may be required by individual Contracting Parties to contribute to the conspicuity of the user both during the daytime and at night from the front, rear, right and left, by means of parts made of reflective materials that conform to the specifications laid down in paragraphs 6.16.2 to 16.6.6 of this regulation.	NA
6.18.1.	It is allowed that the helmet is equipped with reflective materials in the box, with proper indications to the user on where and how to apply them on the helmet. <i>Note: Mandating of conspicuity marks is left to the discretion of individual Contracting Parties. Article 3 of the Agreement to which this regulation is annexed does not prevent the Contracting Parties from prohibiting the use of helmets not meeting the conspicuity requirements.</i>	NA

## 6.18.2 Reflective Parts

6.18.2.1.	Total surface area and shape of the reflective part used is such that in each direction, corresponding to one of the areas defined in the figure below, visibility is ensured by a surface area of at least 18 cm <sup>2</sup>	NA
-----------	--	----

of simple shape and measured by application on a plane.

6.18.2.1.

In each surface area of minimum 18 cm<sup>2</sup>, it is possible to mark either a:

- Circle of 40 mm diameter\*
- Rectangle of at least 12.5 cm<sup>2</sup> in surface area and at least 20 mm in width\*

NA

6.18.2.1.

Each of these surfaces are situated as near as possible to the point of contact with the shell of a vertical plane parallel to the longitudinal vertical plane of symmetry, to the right and to the left, and as near as possible to the point of contact with the shell of a vertical plane perpendicular to the longitudinal plane of symmetry, to the front and to the rear.

NA

6.18.3.

Each of the retro-reflective areas emit white light when it is illuminated with standard illuminant A, with an observation angle of 1/3° and an illumination angle  $\beta_1 = \beta_2 = 0^\circ$  (or  $\beta_1 = \pm 5^\circ$ ,  $\beta_2 = 0^\circ$ ).

NA

6.18.4.

Minimum value of the luminous intensity coefficient of a surface area of 18 cm<sup>2</sup> of material, when revolved, is not less than the values specified in the table below, expressed in millicandelas per lux.

NA

Angle of Divergence (')	Angle of Illumination (°)		
	0	20	40
20	100	60	25

6.18.5.

After each conditioning as described in paragraph 7.2, the helmet is visually inspected. There are no signs of cracking or appreciable distortion of the retro-reflective material.

NA

6.18.6.

Neither the adhesive nor the retro-reflective material affects the mechanical performance of the helmet according to the related tests in this regulation.

NA

## Tests

Each helmet type, fitted with its visor if placed on the market with a visor, conditioned as shown below.

Test	Number of helmets to be conditioned				Total
	ambient- temperature and hygrometry conditioning	Heat conditioning	low-temperature conditioning	ultra- violet radiation conditioning and moisture conditioning	
Impact absorption	2	1	1	1	5
Imp. Abs. extra point	2				2
Hi/Low energy impact	2				2
Rotational	2				2
Projection and surface friction	1				1
Rigidity	2				2
Retention system	1				1
					15

NA

### Testing Notes:

The largest size of each combination shell size and protective padding of each helmet type shall be tested for impact absorption, rotational and rigidity. For impact absorption on extra point, Hi and Low energy impacts and tests of the retention system, helmet sizes shall be chosen such that the helmet to be tested shall be that offering the likely least favorable conditions (such as thickest padding, etc).

All the types of retention systems available for the helmet must be tested. Supplementary samples could be necessary. Additionally, for each smaller headform size within the size range of the helmet type two helmets shall undergo the impact absorption test. One helmet shall be heat conditioned, and the other low temperature conditioned. The conditioned helmets shall be impacted against either anvil, in equal numbers if possible, at the choice of the laboratory.

## Types of Conditioning

Prior to any type of further conditioning for mechanical tests, as specified in paragraph 7.1., each helmet shall be subject:

Ambient-temperature and hygrometry conditioning:

The helmet shall be exposed to a temperature of  $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$  and a relative humidity of 50 per cent  $\pm 10$  per cent for at least 4 hours.

Heat conditioning:

The helmet shall be exposed to a temperature of  $50^{\circ}\text{C} \pm 2^{\circ}\text{C}$  for not less than 4 hours and not more than 8 hours.

Yes

Yes

7.2.3.	Low-temperature conditioning: The helmet shall be exposed to a temperature of $-10\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$ for not less than 4 hours.	Yes
7.2.4.	Ultraviolet-radiation conditioning and moisture conditioning. The outer surface of the protective helmet shall be exposed successively to: ultraviolet irradiation by a 150-watt xenon-filled quartz lamp for 48 hours at a range of 25 cm; spraying for 4 to 8 hours with water at ambient temperature at the rate of 1 litre per minute.	Yes

## Test Results

## Inspection/Test Report: Protective Helmets and their Visors for Drivers and Passengers of Motorcycles and Mopeds

### Legislation

UNECE Regulation 22.06 (Revision 4 Amendment 3)

### Inspection/Test Details

Location of Inspection/Test: Qingyuan SENA Smart Helmets, China  
Date of Inspection/Test: 6 August 2024  
VCA Representative(s): Donghwa Woo  
Inspectors Home Office Location: VCA Korea  
Manufacturer's Representative(s): Suhan Kim  
Reason for Test Report: Production Qualification

### Manufacturer Details

Name and Address: SENA Technologies Co., Ltd.  
19, Heolleung-ro 569-gil  
Gangnam-gu, Seoul  
REPUBLIC OF KOREA  
Type: PHANTOM  
Commercial Description: PHANTOM, PHANTOM PRO, PHANTOM-ANC, PHANTOM-CAM  
Category: "P" with protective lower face cover

### Conclusion

The above mentioned component was tested in accordance with the above mentioned legislation and was found to comply in all respects. This report relates only to the items tested

Witness Engineer Signature:

Name: Donghwa Woo

II		

## Issue Record

Issue 0 is original report

## Worst Case Rationale

Additional PQ Test carried out to verify the impact absorption performance of the variant (PHANTOM).

This test is considered Batch Test No. 1.

*Note: Include information on variants and versions this report covers, as applicable. Supporting documents may be annexed to this report*

## Significant Interpretations, Alternative Test Methods, New Technologies

NA

## Inspection/Tests Required

	Yes, NA, See Report ... / Approval ... / Annex ...
Information for wearers:	Yes
Impact Absorption Tests:	Yes
Dynamic Test of the Retention System:	Yes

## Specification

### Number of Samples

Shell Size:	Large	Medium	Small
Consumer Size:	XXL	L	M
Sample Quantity:	20	20	20
Production Batch Quantity:	3200		
Production Batch Serial Number:	1 - 3200		

### Materials

Shell:	Fibreglass Composite
Padding:	Polyester, Sponge
Liner:	EPS (Expanded Polystyrene type foam)
Chin Strap:	Nylon

### Retention System

Type:	Two section system
Buckle:	Double-D ring
Strap Retainer:	Plastic press stud
Anchorage:	Secured to shell by means of a single rivet to each side of helmet shell

### Ventilation System:

Type of Shell Edging:	Number of ventilations: 3
Accessories:	Front of Crown (Crown), Rear of Crown, Chin guard (Centre)
	PVC gasket
	Visor (Type: SENA -FF-01)

Reflecting Band:  
Additional Feature:

Sun shield (Type: SENA-I/V-01) Specific Accessory (Type: SP149)
NA
NA

### Manufacturer's Documentation

Manufacturer's documentation is complete and reflects the agreed specification for the component tested, and covers all variants and versions agreed in the worst case rationale. Information document uploaded to job folder and identified by job number.

Yes

### Facility and Equipment Checks

Facility Appraisal reference and date (*Reference and date if formal;  
state if ad-hoc appraisal*).

FAK178 and KXB612469  
30 August 2023

Calibration certificates checked and valid, recorded in the following table:

Yes

### Equipment

Description	Make	Model	Serial number	Calibration due date*

Accelerometer (Twin Wire Impact Test Machine)	SHANGHAI B&W SEINSING TECHNOLOGY	356B21	LW347346	19/09/2023 + 1 year
Heat conditioning unit	HOTOTECH	HT-5012	HB22431	06/08/2023 + 1 year
Low temperature conditioning unit	HOTOTECH	HT-5013	HB22432	06/08/2023 + 1 year

\*Specify calibrated date + (interval) or calibration due date.

## Qualifying the Production of Helmets

The production of each new approved type of helmet must be subjected to production qualification tests.

9.2 The first batch is considered to be the production of the first tranche containing a minimum of 200 helmets and a maximum of 3,200 helmets.

-	Random sample of helmets taken from the first batch, divided into homogenous lots of 10, choosing the biggest helmet sizes for each shell size.	Yes
---	---	-----

-	At least two lots among those subjected to the shock-absorption test shall consist of maximum size helmets.	Yes
---	---	-----

9.2.1. Test on the system of retention

9.2.1.1.	The 10 helmets of the smallest size of each shell subjected to the test of the retention system described in paragraph 7.6.	NA
----------	---	----

-	All the types of retention system available for the helmet checked.	NA
---	---	----

9.2.2. Shock absorption test

-	From every shell size of helmet type take two groups each with 10 helmets of the largest size.	Yes
---	--	-----

9.2.2.2.	All of the helmets in a group subjected to the same conditioning treatment and then subjected to the shock absorption test described in paragraph 7.3. at the same point of impact.	Yes
----------	---	-----

-	The conditioning and the anvil for each group chosen by the technical service which conducted the approval tests.	Yes
---	---	-----

-	The location of the points must be the same for all the helmets of the same batch.	Yes
---	--	-----

-	The helmets of the same batch can be submitted to test up to three different impact point.	Yes
---	--	-----

9.2.2.3.	All the shell sizes of a type of helmet submitted to standard linear impact test on the BXPB and S points if present.	NA
----------	---	----

## Information for wearers

14.1.	<p>Every protective helmet placed on the market shall bear a clearly visible label with the following inscription in the national language, or at least one of the national languages of the country of destination.</p> <p>This information shall contain: "For adequate protection, this helmet must fit closely and be securely attached. Any helmet that has sustained a violent impact should be replaced"</p> <p>and, if fitted with a non-protective lower face cover: "Does not protect chin from impacts" together with the symbol indicating the unsuitability of the lower face cover to offer any protection against impacts to the chin.</p>	NA
14.2.	<p>Additionally where hydrocarbons, cleaning fluids, paints, transfers or other extraneous additions affect the shell material adversely a separate and specific warning shall be emphasized in the above-mentioned label and worded as follows: " 'Warning' - Do not apply paint, stickers, petrol or other solvents to this helmet".</p>	NA
14.3.	<p>Every protective helmet shall be clearly marked with its size and its maximum weight, to the nearest 50 grams, as placed on the market. The maximum weight quoted should include all the accessories that are supplied with the helmets, within the packaging, as it is placed on the market, whether or not those accessories have actually been fitted to the helmet.</p>	NA
14.4.	<p>Every protective helmet offered for sale shall bear a label showing the type or types of visor that have been approved at the manufacturer's request.</p>	NA

## Inspection/Test Report: Approval of a Visor Type for Protective Helmets for Drivers and Passengers of Motorcycles and Mopeds

### Legislation

UNECE Regulation 22.06 (Revision 4 Amendment 3)

### Inspection/Test Details

Location of Inspection/Test:	Guangzhou Botai Optical Technology, China
Date of Inspection/Test:	5 August 2024
VCA Representative(s):	Donghwa Woo
Inspectors Home Office Location:	VCA Korea
Manufacturer's Representative(s):	Suhan Kim
Reason for Test:	New approval

### Manufacturer Details

Name and Address:	SENA Technologies Co., Ltd. 19, Heolleung-ro 569-gil Gangnam-gu, Seoul REPUBLIC OF KOREA
Type:	SENA-IV-01
Commercial Description:	NA
Category:	Sun Shield

### Conclusion

The above mentioned component was tested in accordance with the above mentioned legislation and was found to comply in all respects. This report relates only to the items tested.

Witness Engineer Signature:

Name:	Donghwa Woo
Position:	Type Approval Engineer
Date:	5 August 2024

### List of Annexes

Annex	No of Pages	Subject
I		
II		
III		

## Issue Record

Issue 0 is original report

## Worst Case Rationale

Full test carried out to cover the addition of new sun shield for helmet type PHANTOM.

All test equipment was calibrated by an ISO/IEC 17025 accredited calibration laboratory CNAS L1071.

*Note: Include information on variants and versions this report covers, as applicable. Supporting documents may be annexed to this report*

## Significant Interpretations, Alternative Test Methods, New Technologies

NA

## Inspection/Tests Required

	Yes, NA, See Report ... / Approval ... / Annex ...
Markings:	NA
General Specifications:	Yes
Field of vision of the visor:	Yes
Luminous transmittance:	Yes
Light diffusion:	NA
Recognition of signal lights:	Yes
Spectral transmittance:	Yes
Refractive powers:	Yes
Mechanical characteristics:	NA
Optical quality and scratch resistance:	NA
Mist retardant visor (optional)	NA
Sun Shield	Yes
Photochromic visors, liquid crystal or equivalent visors	NA

List of helmets to which the visor may be fitted:	PHANTOM
Structure of visor:	Tinted sun shield with 1.6 mm thickness
Material of visor:	Polycarbonate

## Manufacturer's Documentation

Manufacturer's documentation is complete and reflects the agreed specification for the component tested, and covers all variants and versions agreed in the worst case rationale. Information document uploaded to job folder and identified by job number.

## Facility and Equipment Checks

Facility Appraisal reference and date (*Reference and date if formal;

Inspection/Test Requirements	Complies Yes / NA
------------------------------	----------------------

**Markings: Not applicable; section removed for clarity**

### General Specifications

6.16.1.	The systems of attachment of a visor to a helmet shall be such that the visor is removable.	NA
	It must be possible to manoeuvre the visor out of the field of vision with a simple movement of one hand.	NA
	However, the latter prescription may not be required for helmets which do not provide chin protection provided that a label is attached to the helmet to the effect of warning the purchaser that the visor cannot be manoeuvred.	NA
6.16.2.	Angle opening (See Annex 9)	NA
6.16.3.	Field of vision	NA
6.16.3.1.	The visor shall not comprise any part liable to impair the user's peripheral vision as defined in paragraph 6.15. when the visor is in the totally opened position.	
	Furthermore, the lower edge of the visor shall not be situated in the downward field of vision of the user as defined in paragraph 6.15. when the visor is in closed position.	NA
6.16.3.1.	The surface of the visor in the peripheral field of vision of the helmet may however include:	NA
6.16.3.1. (i)	The lower edge of the visor, provided that it is made of a material with at least the same transmittance as the rest of the visor.	NA
(ii)	A device to allow the visor to be manoeuvred or locked in the closed position. (However, if this device is situated within the field of vision of the visor defined in paragraph 6.16.3.2. It shall be at the lower edge and present a maximum height (h) of 10 mm and its width (l) shall be such that the product (h x l) at the most is equal to 1.5 cm <sup>2</sup> if bigger it must be made of a material with at least the same transmittance as the visor and it must be free of any engraving, paint or other covering feature)	NA
(iii)	Fixings and devices to allow the visor to be manoeuvred if they are situated outside of the field of vision of the visor and if the total surface of these parts, including devices, if any, to allow the visor to	NA

be manoeuvred does not exceed  $2 \text{ cm}^2$ , possibly distributed on each side of the field of vision.

6.16.3.4.

Luminous transmittance.

Visors shall have a luminous transmittance  $\tau_v \geq 80\%$ , relative to the standard illuminant D65.

A luminous transmittance  $80\% > \tau_v \geq 35\%$ , - or 20 per cent only in case of photochromic and/or liquid crystal visor - measured by the method given in paragraph 7.8.3.2.1.1., is also permissible if the visor is marked with the symbol shown in figure 2 and/or with the English words "DAYTIME USE ONLY".

Figure 2: Symbol "Daytime use only"

Note: this symbol or indication must be visible and extend over at least  $1 \text{ cm}^2$

When describing the transmittance properties of photochromic, liquid crystal or equivalent visors, two values are to be considered: one corresponds to the faded state, the other to the darkened state. The luminous transmittance shall be measured before the abrasion test.

6.16.3.5.

Visors shall be free from any significant defects likely to impair the vision, such as bubbles, scratches, inclusions, dull spots, holes, mould marks, scratches or other defects originating from the manufacturing process in the field of vision.

The light diffusion shall not exceed the limit in accordance with paragraph 7.8.3.2.1.2. when measured in accordance with one of the methods specified in annex 11.

If different results arise when this is assessed, the requirements on scattered light shall be measured and assessed over an area 5 mm in diameter which includes the presumed error.

6.16.3.6.

Visors shall in addition be sufficiently transparent, shall not cause any noticeable distortion of object as seen through the visor, shall be resistant to abrasion, resistant to impact and shall not give rise to any confusion between the colour used in road traffic sign and signals.

The relative visual attenuation quotient (Q) shall not be less than:

- (Q)  $\geq 0.80$  for red signal lights;
- (Q)  $\geq 0.60$  for yellow signal light;
- (Q)  $\geq 0.60$  for green signal light;
- (Q)  $\geq 0.60$  for blue signal light.

NA
NA
NA
NA

The relative attenuation quotient shall be measured by the method  
given in paragraph 7.8.3.2.1.1., before the abrasion test.

NA
----

6.16.3.7

In the range 475 nm to 650 nm, the spectral transmittance,  
measured by the method given in paragraph 7.8.3.2.1.1., of the visor  
shall not be less than  $0.2 \tau_v$ .

NA
----

The spectral transmittance shall be measured before the abrasion  
test.

NA
----

6.16.3.8

Permissible Refractive Power values for visors:

- Spherical effect :  $(D_1 + D_2)/2 = \pm 0.12 \text{ m}^{-1}$
- Astigmatic effect :  $|D_1 - D_2| = 0.12 \text{ m}^{-1}$
- Prismatic effect difference

NA
NA

- Horizontal Base Out : = 1.00 cm/m
- Horizontal Base In : = 0.25 cm/m
- Vertical : = 0.25 cm/m

NA
NA
NA

The refractive powers shall be measured according to method  
specified in annex 15.

NA
----

6.16.3.9

Mist Retardant Visor (Optional requirements)

The internal face of the visor is regarded as having a mist  
retardant facility if the square of the specular transmittance has not  
fallen below 80 per cent of the initial value without misting within 20 s  
when tested as described in annex 16.

NA
----

Such facility may be indicated by the English words: "MIST  
RETARDANT"

NA
----

6.17

## Sun Shield

Sun shield shall not restrain or prevent the movement of the visor.  
On opening the visor, the sun shield can pivot in the working  
position.

6.17.1.

By means of a simple movement the sun shield shall be able to be  
moved separately from the visor out of the visual field.

Yes
-----

6.17.2.

Field of vision

UK Vehicle Approval Authority Certification Agency
---

6.17.2.1.	Sun shield shall not restrict the field of vision given in paragraph 6.15. in the working or parking position. (If the sun shield is fixed outside of the visor, the surface may include fixings or devices to make movement possible. The total surface of the fixings or devices shall not exceed 2cm <sup>2</sup> ; they can be distributed on both sides of the field of vision.)	Yes
6.17.2.2.	Sun shield shall have a luminous transmittance $\tau_v \geq 20\%$ , relative to the standard illuminant D65.	Yes
6.17.2.3.	Sun shield shall be free from any significant defects likely to impair the vision, such as bubbles, scratches, inclusions, dull spots, holes, mould marks, scratches or other defects originating from the manufacturing process in the field of vision.	Yes
6.17.2.4.	Sun shield shall not cause any noticeable distortion of object as seen through the visor, resistant to impact and shall not give rise to any confusion between the colour used in road traffic sign and signals. The relative visual attenuation quotient (Q) shall not be less than:	Yes
	(Q) $\geq 0.80$ for red signal lights;	Yes
	(Q) $\geq 0.60$ for yellow signal light;	Yes
	(Q) $\geq 0.60$ for green signal light;	Yes
	(Q) $\geq 0.60$ for blue signal light.	Yes
	The relative attenuation quotient shall be measured by the method given in paragraph 7.8.3.2.1.1	Yes
6.17.2.5.	In the range 475 nm to 650 nm, the spectral transmittance, measured by the method given in paragraph 7.8.3.2.1.1., of the sun shield shall not be less than 0.2 $\tau_v$ .	Yes
6.17.2.6.	Permissible refractive powers at the sight points.	
	Permissible refractive power values for sun shields; measured without a combination with the visor.	Yes
	Spherical effect : (D1+D2)/2 = +/- 0.12 m-1	Yes
	Astigmatic effect :  D1-D2  = 0.12 m-1	Yes
	Prismatic effect difference	Yes
	Horizontal Base Out : = 1.00 cm/m	Yes
	Horizontal Base In : = 0.25 cm/m	Yes
	Vertical : = 0.25 cm/m	Yes
	The refractive powers shall be measured according to method specified in annex 15.	Yes

The requirements for the prismatic effect apply to the difference  
between the values at the two sight points.

## TEST

### 7.8. VISOR TESTS

#### 7.8.1. Sampling and use of samples

The 7 (+3 if optional test) visors are used as shown below in Tab 1

NA

The test for recognition of signal lights may be dispensed with in the  
case of visors with luminous transmittance  $\tau_v \geq 80 \%$

NA

#### 7.8.1.1. Prior to any type of further conditioning for mechanical or optical test, as specified in paragraph 7.8.1., each visor shall be subject to the ultraviolet conditioning in accordance with the provision of paragraph 7.2.4.1.

NA

#### 7.8.2. Mechanical characteristics

##### 7.8.2.1. The helmet, fitted with its visor and previously conditioned in accordance with the provisions of paragraph 7.2.3., shall be placed in accordance with the provisions of paragraph 7.3.1.3.1. on a test headform of suitable size.

NA

The test headform selected from among those shown in annex 4  
shall be so placed that the basic plane is vertical.

NA

##### 7.8.2.2.1. Test apparatus is as per 7.8.2.2. and 7.8.2.2.1.

NA

##### 7.8.2.2.2. When the drop-hammer falls from a height of $1 + 0.005$ m, measured between the top face of the punch and the lower face of the hammer it shall be ascertained that:

##### 7.8.2.2.3. No sharp splinters are produced if the visor is shattered. (Any segment having an angle less than $60^\circ$ shall be considered as a sharp splinter.)

NA

#### 7.8.2.3. High Speed particle test

##### 7.8.2.3.1. Visors tested in accordance with the method specified in Annex 17

NA

##### Annex 17, 2.1. Appropriate headform, as defined in 7.3.3.

NA

##### Annex 17, 2.2. Propulsion equipment as per Annex 17, 2.2.

NA

##### Annex 17, 3. Two samples conditioned in air at $50^\circ\text{C}$ for 2 h and two additional samples shall be conditioned in air at $-10^\circ\text{C}$ for 2 h;

NA

##### - Eye-protector to be tested placed on the headform in the position corresponding to normal use and with the tension of the headband, if fitted, adjusted according to the manufacturer's instructions.

NA

-	Sheet of carbon paper on top of a sheet of white paper, between the eye-protector and the head-form inserted.	NA
-	Eye-protector/headform assembly positioned in front of the propulsion equipment so that the point of impact is not more than 250 mm from the exit end of the speed sensing equipment.	NA
-	Project the steel ball at 60 m/s. The points of impact are (L1 and L2).	NA
-	(a) Left eye frontal;	NA
-	(b) Right eye frontal;	NA
-	The impact of the steel ball on the goggles within 30 s after the removal of the sample from the corresponding atmosphere;	NA
-	Test made at an ambient temperature of $(23 \pm 5) ^\circ\text{C}$ ;	NA
-	New specimens shall be used for this test and each specimen shall only be subjected to two impacts.	
7.8.2.3.2.	After testing, the following defects shall not occur:	
	(a) Visor fracture: a visor shall be considered to have fractured if it cracks through its entire thickness into two or more pieces, or visor material becomes detached from the surface away from the one struck by the ball, or if the ball passes through the visor;	NA
	(b) Visor deformation: a visor shall be considered to have been deformed if a mark appears on the white paper on the opposite side to that struck by the ball;	NA
	(c) Visor housing failure: a visor housing shall be considered to have failed if it separates into two or more pieces, or if it is no longer capable of holding a visor in position.	NA
7.8.3.	Optical qualities and scratch resistance	
7.8.3.1	Test procedure:	NA
7.8.3.1.1	Test piece taken from the flattest part of the visor in the area specified in paragraph 6.16.3.2. and its minimum dimensions shall be 50 mm x 50 mm. The test shall be carried out on the face corresponding to the outside of the visor.	NA
7.8.3.1.2	The test piece shall undergo ambient-temperature and hygrometry conditioning in accordance with paragraph 7.2.2.	NA
7.8.3.1.3	Test sequence of operations is as follows:	
7.8.3.1.3.1	- The surface of the test piece shall be washed in water containing 1 per cent detergent and rinsed with distilled or demineralized water, then carefully dried with a grease-free and dust-free linen cloth.	NA
7.8.3.1.3.2		

7.8.3.1.3.3	- Immediately after drying and before abrasion, the luminous transmittance shall be measured using the method given in paragraph 7.8.3.2.1.1., and the light diffusion shall be measured according to one of the methods specified in Annex 11.	
7.8.3.1.3.4		
7.8.3.1.3.5	<ul style="list-style-type: none"> <li>- The test piece shall then be subjected to the abrasion test described in Annex 10, during which 3 kg ± 0,01 kg of abrasive material shall be projected at the sample.</li> <li>- Following the test, the test piece shall again be cleaned in accordance with paragraph 7.8.3.1.3.1.</li> <li>- Immediately after drying the light diffusion after abrasion shall be measured by using again the same method used in accordance with paragraph 7.8.3.1.3.2</li> </ul>	
7.8.3.2.1.1.	In a parallel beam, with the test specimens being irradiated vertically, determine the spectral transmittance values between 380 nm and 780 nm and then the transmittance and the visual attenuation quotient in accordance with the equations given in annex 13.	NA
7.8.3.2.1.2.	The light diffusion shall not exceed the following values for each method:	
	Before abrasion: 0.65/m <sup>2</sup> /l (a/ c/), 2.5 % (b/)	NA
	After abrasion: 5.0/m <sup>2</sup> /l (a/ c/), 10 % (b/)	NA
7.9	Sun shield tests	
7.9.1.	Sampling and use of samples	
	The 7 sun shield are used as shown below in Tab 8	Yes
7.9.1.1.	Prior to any type of further conditioning for optical test, as specified in paragraph 7.9.1., each sun shield shall be subject to the ultraviolet conditioning in accordance with the provision of paragraph 7.2.4.1.	Yes
7.14.	Test of photochromic visors, liquid crystal or equivalent visors	
7.14.1	The photochromic visor is characterized by its luminous transmittance that shall be determined in faded state $\tau_{v0}$ and in darkened state $\tau_{v1}$ achieved after 15 min irradiation according with the method specified in Annex 18.	NA
7.14.1	For photochromic visors, $\tau_{v0}/\tau_{v1}$ is $\geq 1.25$ .	NA
7.14.2.	Visors tested in accordance with the method specified in Annex 18.	NA

Annex 18, 2.1.3

Conditioning for luminous transmittance in the faded state.

Unless the manufacturer specifies a different procedure to reach the faded state in the information supplied with the product, photochromic visors shall be conditioned as per Annex 18, 2.1.3

NA

written approval of the technical service.

## Remarks

None

*Note: VCA apply measurement uncertainty to calibrated items but not test results.*

## Inspection/Test Report: Approval of a Visor Type for Protective Helmets for Drivers and Passengers of Motorcycles and Mopeds

### Legislation

UNECE Regulation 22.06 (Revision 4 Amendment 3)

### Inspection/Test Details

Location of Inspection/Test:	Guangzhou Botai Optical Technology, China
Date of Inspection/Test:	6 - 7 August 2024
VCA Representative(s):	Donghwa Woo
Inspectors Home Office Location:	VCA Korea
Manufacturer's Representative(s):	Suhan Kim
Reason for Test Report:	Production Qualification

### Manufacturer Details

Name and Address:	SENA Technologies Co., Ltd. 19, Heolleung-ro 569-gil Gangnam-gu, Seoul REPUBLIC OF KOREA
Type:	SENA -IV-01
Commercial Description:	NA
Category:	Sun Shield

### Conclusion

The above mentioned component was tested in accordance with the above mentioned legislation and was found to comply in all respects. This report relates only to the items tested

Witness Engineer Signature:

Name:	Donghwa Woo
Position:	Type Approval Engineer
Date:	7 August 2024

### List of Annexes

Annex	No of Pages	Subject
I		
II		
III		

## Issue Record

Issue 0 is original report

## Worst Case Rationale

Full test carried out for production qualification.

*Note: Include information on variants and versions this report covers, as applicable. Supporting documents may be annexed to this report*

## Significant Interpretations, Alternative Test Methods, New Technologies

NA

## Inspection/Tests Required

	Yes, NA, See Report ... / Approval ... / Annex ...
Markings:	NA
Luminous transmittance:	Yes
Light diffusion:	NA
Recognition of signal lights:	Yes
Spectral transmittance:	Yes
Refractive powers:	Yes
Mechanical characteristics:	NA
Optical quality and scratch resistance:	NA
Mist retardant visor (optional)	NA
List of helmets to which the visor may be fitted:	PHANTOM
Structure of visor:	Tinted sun shield with 1.6 mm thickness
Material of visor:	Polycarbonate

## Manufacturer's Documentation

Manufacturer's documentation is complete and reflects the agreed specification for the component tested, and covers all variants and versions agreed in the worst case rationale. Information document uploaded to job folder and identified by job number.

Yes

## Facility and Equipment Checks

Facility Appraisal reference and date (*Reference and date if formal; state if ad-hoc appraisal*).

Facilities suitable

Calibration certificates checked and valid, recorded in the following table:

Yes

## Equipment

Description	Make	Model	Serial number	Calibration due date*
Optical Test Bench	AD Engineering	12SBDBP1046/ PLUS/CAM	OBP17/015-03	13/10/2023 + 1 year
Light transmission Test Equipment	AD Engineering	UV-M51	UVM51- HE1805009	13/10/2023 + 1 year

\*Specify calibrated date + (interval) or calibration due date.

## Inspection/Test Requirements
